

# People Depot

People Depot aims to provide a single source of truth as the backend infrastructure and data store for Hack for LA projects, including data about people, program areas, projects and impact. The goal is to serve as a repository of information for other infrastructure projects (e.g., VRMS, Hack for LA Website, Civic Tech Index, Tables, etc.) and to be a data warehouse for Hack for LA.

---

## History

- Collaborating with stakeholders, to design and optimize data models for database infrastructure and workflow
- Generated a Entity Relationship Diagram (ERD)
- Identified initial tables
- Established Stakeholder priorities
- Setup Terraform for provisioning AWS repository
- Containerized the local development environment to get new developers working fast

## 6 Month Roadmap

- Finalizing Data Model (event model, permissions, etc.)
- AWS dev instance functional
- Create all initial tables

## Partners

- VRMS
- Civic Tech Jobs
- Hack for LA/Website
