

Civic Tech Jobs (civictechjobs.org)

Civic Tech Jobs will be a platform to help prospective Hack for LA volunteers find interdisciplinary projects that will be useful for their career development while contributing to positive civic impact.

Our custom-built CMS (Content Mgmt System) will allow projects to be able to list the skill set they need to move their project forward and will match volunteers by availability, skills, and program area. This will solve two key pain points for our organization. First, it would support the Product Management program area, by making recruiting for projects easier. Second, it will help the organization's efforts of being an inclusive and self-sustaining organization for anyone who chooses to volunteer for one day to years. Future iterations of the platform will focus on helping volunteers find volunteer opportunities that match paid job postings, so that a volunteer can better prepare themselves for the marketplace.

History

Hack for LA evolved from in person onboarding to remote, and has taken a systematic and iterative approach to arrive at the need for a dedicated interface to manage and list volunteer opportunities. [Read more](#).

Recent Progress

- Landing page is live
- Coming soon page designs approved and page is live

6 Month Roadmap

- Create the system design for MVP
- Create Backend architecture
- Develop the service map of the job posting process and the user experience
- Design the search page (including the self-filter page), and the CMS
- User testing for MVP
- Complete the MVP and launch
